Core Feature: WordPress Content Statistics

General · https://wpclientreports.com/docs/general/wordpress-content-statistics/

This is a simple module that comes with the free plugin. Similar the the statistics on the WordPress “At a Glance” dashboard widget, it outputs content statistics like:

- Number of posts
- Number of pages
- Number of comments

The difference between the At a Glance widget is that this report looks at the date published for each of these pieces of content and only reports on the number of them posted during the time period chosen for the report.
